

PR Cutwork Kit

Expand the creative embroidery options of your **PR650** or **PR1000** series machines with new cutwork capabilities.

- 4-needle cutwork
- 30 cutwork designs included
- Create cutwork appliques from your own .PES files
- Upgrades PE-DESIGN 5 or above to PE-DESIGN NEXT + Cutwork

Create and customise beautiful embroidery cutwork on your PR650/PR1000 series multi-needle embroidery machine.

The Cutwork kit adds three levels of functionality to your machine.

Basic cutwork - embroider and cut the included designs

This kit includes 30 beautiful .pes cutwork designs, which you can have your PR-series machine embroider and cut.

Perfect for the beginner looking to try cutwork for the first time.

Designs include patterns with cut-outs, appliqué patterns and patterns cut along their outline.

Intermediate cutwork – create appliqués from your own .pes files

Turn any .pes lettering or design file into an appliqué. Use the .pes files built into your PR-series machine, or import your own .pes files, and have your PR machine embroider and cut the design.

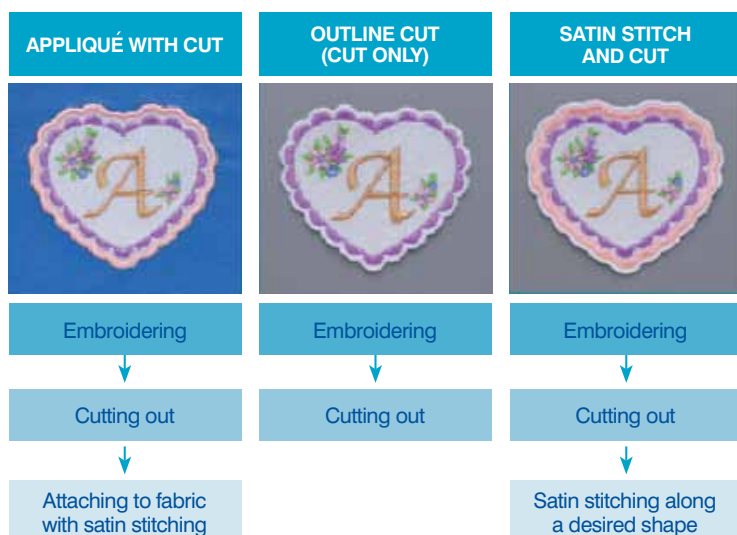

Choose from 21 outline cutting shapes

Add outline shapes to any .pes design or lettering file built into your machine, or import your own .pes design or lettering file.

Select from 21 outline cutting shapes for appliqués, patches and other cutwork projects. Popular shapes include circle, square, diamond, hexagon.

Choose from a range of cutting and stitching options

Select directly from the LCD display panel of your PR-Series machine.

Advanced cutwork – design, customise, and digitise your own cutwork!

Upgrade your *PE-DESIGN software to PE-DESIGN NEXT Version 9.2 with 4-Needle Cutwork.

Enjoy exceptional design and editing features, and the ability to create your own customised cutwork designs. With the innovative, versatile 4-Needle Cutwork Kit, your creative possibilities are virtually limitless!

4 colour-coded cutwork needles

Easily cut and embroider your designs without having to stop to change needles between steps.

Needles 1 to 4 are replaced with the four colour-coded cutwork needles, leaving the remaining needles for embroidery.

Now your PR-Series embroidery machine will be ready to embroider AND cut your design, without the need to swap between cutting and embroidery needles – another great benefit of owning a multi-needle machine!

Kit Includes:

- 4 colour-coded cutwork needles
- CD-ROM containing PE-DESIGN NEXT Version
- CD-ROM containing certification key wizard (for PR-Series machine upgrade software and an instruction manual), and 30 cutwork designs.
- Water soluble stabilizer - Appx. 75cm × 30cm
- 2 cutwork needle-changing tools
- Needle plate spacer
- Tutorial DVD-ROM

Requirements

Compatible with PR-650, PR650e, PR-1000, and PR1000e models; not compatible with PR-600, PR-600II and PR-620 models. Internet connection and PC required to download cutwork software.

*PE-DESIGN Version 5.0 or above, or PE-DESIGN NEXT, in order to use the full customising and editing functions of the included PE-DESIGN NEXT Version 9.2 upgrade. The basic cutwork functions (embroider and cut included 30 designs) and intermediate functions (create appliqués without a PC) can be used by upgrading your PR Series machine with the downloaded firmware; the basic and intermediate functions do not require previous versions of PE-DESIGN, and do not require installing the included PE-DESIGN Version 9.2 upgrade.
